POCKETT'S PEACE SET

OF NEW LARGE CHRYSANTHEMUMS

FOR SPRING, 1946.

Raised by Thomas W. Pockett, O.B.E., Healesville, Victoria.

These Chrysanthemums have been thoroughly tested this Season at "Cowley" Nurseries, and proved to be another advance made in the Pockett introductions.

***ALAN JOBSON.** Yellow incurved. Another addition to the large Exhibition kinds, and a good keeper. The plant is rather tall, and has fairly large foliage. For best results, select buds early in February. 7/6 each

***JOHN POCKETT.** Terra Cotta. A large, full flower with broad petals of reflexing form, that slightly incurve at the tips, and show the silvery reverse: growth and stem very strong. Will be a boon to exhibitors, for high-class decorations, or for growing as specimen plants. Select any bud after 12th February. 7/6 each

***MARGARET JEAN CAMPBELL.** Salmon with silvery buff reverse. A broad petal of a whorl and incurving type, the color being distinct from any previous introduction. The flower itself is large enough for Exhibition, whilst the flower stem is the strongest we ever had, with medium-sized leaves and dwarf habit. This should be the commencement of a new race of Exhibition and decorative varieties. Select buds after 11th February. 7/6 each

***Mrs. MYRTLE ROLFE.** Pink. Very large and compact, and full on all buds; nice stems, easily grown, and suitable for anyone requiring large flowers for Exhibition or decoration. Select any bud after 11th February 7/6 each

***PAMELA VESTY.** Extra large white, whorled and reflexing, of perfect form, and quite distinct. Strong stem, full flower, and of good keeping qualities. This variety will line up with the already large whites seen at the big shows. To obtain the largest flowers, select buds early in February 7/6 each

***POCKETT'S MAROON.** The darkest large exhibition variety raised. Petals reflexing with slight incurve at the tips. Nice growth and stem. Select buds first week in February, which is necessary to obtain the large number of petals for an Exhibition bloom. . . . 7/6 each

CHOICE CHRYSANTHEMUM NOVELTIES FOR 1945.

LARGE DISTINCT EXHIBITION VARIETIES.

- ***LADY GOWRIE.** White with broad incurving petals; an outstanding large exhibition variety. To obtain the best blooms select the natural early bud from 25th January to 5th February, and allow plants to make steady growth. Withhold feeding when showing petals. **5/- each**
- ***BILLIE MITCHELL.** Yellow with broad whorled and incurving petals, making a large exhibition flower of good quality. Select crown buds from 1st-10th February. **3/6 each**
- ***A. J. WHITCHER '45.** Reddish amber with long broad petals having a tendency to incurve, making a typical exhibition variety. Select 2nd crown buds from 10th-18th February. **3/6 each**
- ***CHARLIE DAY.** Crimson red with light chocolate reverse, broad petals and not subject to fading. Extra dwarf grower and full centred. For exhibition or decoration, secure buds 10th-20th February. **3/6 each**

DECORATIVE VARIETIES.

- ***HAROLD ALSTON.** Intense crimson red reflexed for flowering from 12th May onwards. This is the most perfect late decorative of all time. Strong stems, small leaves, dwarf habit, free blooming and keeping qualities will guarantee this outstanding kind to be grown by the million. 5 or 100 blooms may be grown on one plant. If disbudding intended, it is best to do so at end of March. **5/- each**
 - ***JOYCE WILKINSON.** Yellow incurved, very full, and a wonderful keeper. The plant has stout stems, small leaves, and is extra dwarf. If for exhibition secure late buds after 12th February. . . **2/6 each**
 - ***LESMA DAY.** Bright rosy amaranth with silvery reverse. A typical large reflexed decorative, 6½ inches in diameter, carried on a strong stem. This is a good keeper, but being so very full, buds should not be selected until after 16th February. **2/6 each**
 - ***VERA POCKETT.** Quilled white of globular shape, about 4½ inches in diameter when slightly disbudded. Plants should be allowed to break naturally and form a number of buds before attempting to disbud, say early in March. A plant will give a number of perfectly formed blooms early in May. **2/6 each**
- *Denotes Varieties raised by Thomas W. Pockett, Healesville, Victoria.

CHOICE CHRYSANTHEMUM NOVELTIES FOR 1944.

THESE CHRYSANTHEMUMS ARE OF OUTSTANDING MERIT AND
QUITE DISTINCT FROM ALL PREVIOUS INTRODUCTIONS. THE
DECORATIVE QUALITIES ALONE OF THIS SET WILL BE A
FEATURE TO BE REMEMBERED.

*DAME ENID LYONS. Perfectly formed white decorative, suitable for
any purpose, flowering from the end of March until end of April.
A wonderful keeper. Award of Merit R.H.S. 1/6 each

*SIR T. S. NETTLEFOLD. Pure yellow and beautifully incurved. A
large decorative flowering from the middle of May until the middle
of June 1/6 each

*Mrs. EDWARD CAMPBELL, C.B.E. Very large, pure white decorative
for June, flowering quite distinct and attractive. On opening, the
centre has a decidedly waxy appearance with green shading. 2/6 each

*SAY EDGAR. A distinct reflexing large full decorative. Color may be
described as Royal Purple, with silvery reverse. Flowering during
April and May. 1/6 each

*Mrs. ADA PHILLIPS. Large, full, intense yellow, suitable for any pur-
pose. For exhibition, select first crown early in February. Later buds
give attractive whorled blooms for decoration 1/6 each

*MADGE GUNNER. A delicate shell-pink color and a perfectly full
flower under all conditions. Semi-incurving. For exhibition, select
buds about 16th February. 1/6 each

*ADA WHITCHER. A beautiful satin-like white decorative or incurved
that was greatly admired, and received the Award of Merit for the
best new decorative; perfectly full, and a wonderful keeper; flowering
from middle of April until end of May. 1/6 each

*JEAN JONES. A large single of a deep red color. Strong growth and
free flowering 1/6 each

*Denotes Varieties raised by Thomas W. Pockett, Healesville, Victoria.
